

Hi, I'm Ahyoung Ryu.

I care most about building products that solve a real problem for the people using them. I currently work on the AI Agent Messenger SDK and Chat UIKit at Sendbird.

Experience

2023.04 – Present

Sendbird

Senior Software Engineer · Client Platform · AI Agent

At Sendbird, I build the AI Agent Messenger SDK and Chat UIKit. I also work directly with customers adopting the SDK and maintain the older UIKit codebase.

- Built the React SDK and proof-of-concept environments that early customers used in their own services.
- Modernized five years of Chat UIKit legacy code and raised test coverage from 22.51% to 50%.

2021.04 – 2023.02

TossBank

Front-end Engineer · Loan Tribe · Personal Loan

I was the sole front-end engineer for TossBank's personal-loan application and management screens before the bank launched.

- Designed webview screens, app-bridge abstractions, and web-scraping communication modules for personal loans.
- Built a single-source compliance-label system with an API, React component, and expiration alerts.

2020.03 – 2021.04

Lunit

Front-end Engineer

Designed and built digital-pathology annotation and AI-result visualization tools.

- Rebuilt a debt-heavy annotation tool with a new stack in six weeks.
- Used Web Workers and OffscreenCanvas to visualize AI results over large pathology images.

2017.08 – 2020.03

Zepl

Front-end Engineer

Improved the core notebook experience and data-visualization performance of an Apache Zeppelin-based SaaS product.

- Improved notebook interaction responsiveness by 100% to 300% and rebuilt the core AngularJS notebook in React.
- Introduced Web Workers and canvas charts to remove page freezes from large visualization pipelines.

Selected work

Sendbird
2025-01 – Present

AI Agent Messenger SDK

A React-based Messenger SDK that lets customers integrate and validate AI agents across web and webview environments.

Sendbird
2024-06 – 2024-12

Chat UIKit Modernization

Reworked five years of React legacy code and raised test coverage from 22.51% to 50%.

AI Chatbot Self-service Performance

Built the client side alone for an early product that adds an AI chatbot to a website with a few lines of script.

More of my work

Open source

As an Apache Zeppelin committer and PMC member, I made 104 commits, ranked ninth among 281 contributors.

Teaching and talks

I taught an 11-hour Apache Zeppelin course at Fast Campus and spoke at ApacheCon Europe and North America.

Education

Sookmyung Women's University

B.S. in Computer Science
2012-03 - 2016-08

Languages

Korean Native

English Professional working proficiency
