

Ahyoung Ryu

Senior Software Engineer · Front-end

I am a front-end engineer who builds B2B SDKs and complex web products, and turns long-lived React systems into faster, more reliable platforms. My experience spans zero-to-one product development, large-scale legacy modernization, customer integrations, and mentoring engineers.

01 How I work

I define product problems, build systems that last, and measure what changes.

● SDK · Developer Experience Designs APIs and component systems that let external developers integrate products with minimal implementation cost.	● Product Architecture Builds React architectures for complex state and long-term operation, including large-scale legacy migrations.	● Performance · Quality Improves bundles, rendering, testing, and delivery pipelines against measurable product metrics.	● Technical Leadership Defines problems, leads projects to completion, and raises team execution through reviews, onboarding, and mentoring.

02 Experience

A focused view of the product and organizational impact from my recent roles.

2023.04 – Present

Sendbird

Senior Software Engineer · Client Platform · AI Agent

Builds the AI Agent Messenger SDK and Chat UIKit, owning customer integrations, product architecture, performance, and quality.

- Led the architecture of a React-based AI Agent Messenger SDK and customer proof-of-concept environments.
- Modernized five years of Chat UIKit legacy code and raised test coverage from 22.51% to 50%.

TypeScript React Vite pnpm Yarn Berry GitHub Actions

2021.04 – 2023.02

TossBank

Front-end Engineer · Loan Tribe · Personal Loan

Owned the front end for personal-loan application and management funnels from before TossBank's public launch.

- Designed webview screens, app-bridge abstractions, and web-scraping communication modules for personal loans.
- Built a single-source compliance-label system with an API, React component, and expiration alerts.

TypeScript React Next.js React Query Recoil WebdriverIO

2020.03 – 2021.04

Lunit

Front-end Engineer

Designed and built digital-pathology annotation and AI-result visualization tools.

- Rebuilt a debt-heavy annotation tool with a new stack in six weeks.
- Used Web Workers and OffscreenCanvas to visualize AI results over large pathology images.

TypeScript React Redux Redux Saga Web Worker OffscreenCanvas

2017.08 – 2020.03

Zepl

Front-end Engineer

Improved the core notebook experience and data-visualization performance of an Apache Zeppelin-based SaaS product.

- Improved notebook interaction responsiveness by 100–300% and rebuilt the core AngularJS notebook in React.
- Introduced Web Workers and canvas charts to remove page freezes from large visualization pipelines.

JavaScript React AngularJS Redux Saga Web Worker D3

03 Selected projects

Work that best shows the problem scale, technical judgment, and product outcomes.

01 Sendbird AI Agent Messenger SDK A React-based Messenger SDK that lets customers integrate and validate AI agents across web and webview environments. 2025-01 – Present	02 Sendbird Chat UIKit Modernization A modernization of a five-year-old React UIKit spanning architecture, test strategy, and customer onboarding. 2024-06 – 2024-12
03 TossBank TossBank Personal-loan Funnel Owned every webview screen required to apply for and manage personal-loan products from before TossBank's launch. 2021-04 – 2023-02	04 Lunit Digital Pathology Annotation & Visualization A set of browser tools for annotating pathology slides and visualizing AI-analysis results. 2020-03 – 2021-04
05 Zepl Apache Zeppelin Open-source Contributions Contributed product code, documentation, and community leadership as an Apache Zeppelin committer and PMC member. 2015 – Present	06 Zepl Zepl Notebook & Visualization Performance Modernized the rendering architecture and large-chart pipeline of Zepl's core notebook experience. 2018-06 – 2019-03

04

Open source & community

I contribute beyond product code through documentation, teaching, and speaking.

APACHE SOFTWARE FOUNDATION Apache Zeppelin Open-source Contributions Became a leading contributor with more than 100 commits and was elected committer and PMC member.	COMMUNITY Teaching & Speaking Shared Apache Zeppelin and open-source experience with developer communities in Korea and abroad.
